

JavaScript Object Datatype - Notes

1. What is Object?

Object stores data in key : value pairs.
Used to group related information together.

2. Syntax

```
let user = { name: 'Ram', age: 24 };
```

3. Typeof

```
typeof user -> object
```

4. Access Values

```
user.name  
user['age']
```

5. Add / Update / Delete

```
user.city = 'Bangalore'  
user.age = 25  
delete user.city
```

6. Nested Object

Object can contain another object.

7. Methods

Object can store functions.

```
user.greet = function(){}

```

8. Useful Methods

```
Object.keys(obj)  
Object.values(obj)  
Object.assign({}, obj)
```

9. Looping

```
for(let key in obj) { ... }
```

10. Real Uses

Student details, product info, employee data, settings.

11. Important Note

Two objects with same values are not equal if references differ.

12. Best Practice

Use camelCase property names.

13. Quick Revision Table

Feature	Example
Basic Object	{name:'Ram', age:24}
Access	obj.name
Bracket Access	obj['name']
Type	object
