

JavaScript Undefined Datatype - Notes

What is Undefined?

Undefined means a variable exists but has no assigned value yet.

Examples

```
let a;  
console.log(a) -> undefined  
typeof a -> undefined
```

Common Cases

1. Declared variable without value
2. Function without return
3. Missing object property
4. Missing array index

Function Example

```
function test(){  
let x = test();  
Output -> undefined
```

Property Example

```
let person = {name:'Ram'};  
person.age -> undefined
```

Comparison

```
undefined == null -> true  
undefined === null -> false
```

Boolean Conversion

```
Boolean(undefined) -> false
```

Best Practice

```
Check using:  
value === undefined
```
