

JavaScript Boolean Datatype - Notes

What is Boolean?

Boolean datatype has only two values:

true

false

Used for yes/no, on/off, pass/fail, login/logout.

Examples

```
let a = true;
```

```
let b = false;
```

```
typeof true -> boolean
```

Boolean vs String

```
true -> boolean
```

```
false -> boolean
```

```
"true" -> string
```

```
"false" -> string
```

Comparison Results

```
10 > 5 -> true
```

```
10 < 5 -> false
```

```
10 == 10 -> true
```

Boolean Conversion

```
Boolean(1) -> true
```

```
Boolean(0) -> false
```

```
Boolean("Hello") -> true
```

```
Boolean("") -> false
```

Falsy Values

```
false
```

```
0
```

```
""
```

```
null
```

```
undefined
```

```
NaN
```

Best Practice

Use names like:

```
isLoggedIn
```

```
isActive
```

```
hasAccess
```
