

JavaScript let Variables - Notes

1. What is let?

let is used to declare variables whose value can change.

2. Syntax

```
let a = 10;
```

3. Reassignment

let allows changing value later.

```
a = 20;
```

4. Block Scope

let works inside block {} only.

5. No Redeclaration

Cannot declare same variable again using let.

6. Data Types

let can store number, string, boolean, array, object.

7. typeof

typeof variable shows datatype.

8. Best Practice

Use let when value changes.

9. Quick Revision Table

Feature	let
Reassign	Yes
Redeclare	No
Scope	Block
Use Case	Changing values
